

KNOWING WHAT YOU DON'T KNOW:

Instructor and student strategies
for promoting metacognition

Diane P. Lam, Ph.D.

Feb 15th, 2017

Curriculum Fellows Program

Harvard Medical School

The Plan

Metacognition primer activity

- Metacognition:
 - What it is
 - Why it matters
- Strategies for *instructors*
- Strategies for *students* (Self-Explanation)
- Activity revisited

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

Meta- cognition Primer

- 1) Have paper and pen ready
- 2) *Without naming them*, predict how many states you think you can write down in 60 seconds?
(full state names, not abbreviations)

3)

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

Meta- cognition Primer

Check your prediction

What did you consider when predicting the number of states you could name?

The Plan

- Metacognition primer activity

Metacognition:

- What it is
- Why it matters
- Strategies for *instructors*
- Strategies for *students*
- Activity revisited

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

What is metacognition?

Cognitive knowledge

&

Cognitive regulation

1) Content Knowledge

How well do I know state names?

2) Task Knowledge

How fast can I write?

3) Strategy Knowledge

What's my plan of attack?

What is metacognition?

Cognitive knowledge

&

Cognitive regulation

Am I using the strategy I picked?

1) Monitoring

Is it working?

2) Evaluating

Am I confident?

3) Motivating

What is metacognition?

Cognitive knowledge

&

Cognitive regulation

1) Content Knowledge

2) Task Knowledge

3) Strategy Knowledge

1) Monitoring

2) Evaluating

3) Motivating

A Tale of Two Papers

01

Why People Fail to Recognize Their Own Incompetence

David Dunning, Kerri Johnson, Joyce Ehrlinger, and Justin Kruger

Predicting performance

Department of Psychology, Cornell University, Ithaca, New York (D.D., K.J., and J.E.), and Department of Psychology, University of Illinois, Champaign-Urbana, Illinois (J.K.)

02

What cognitive strategies in student learning:
Do students practise retrieval when they study
on their own?

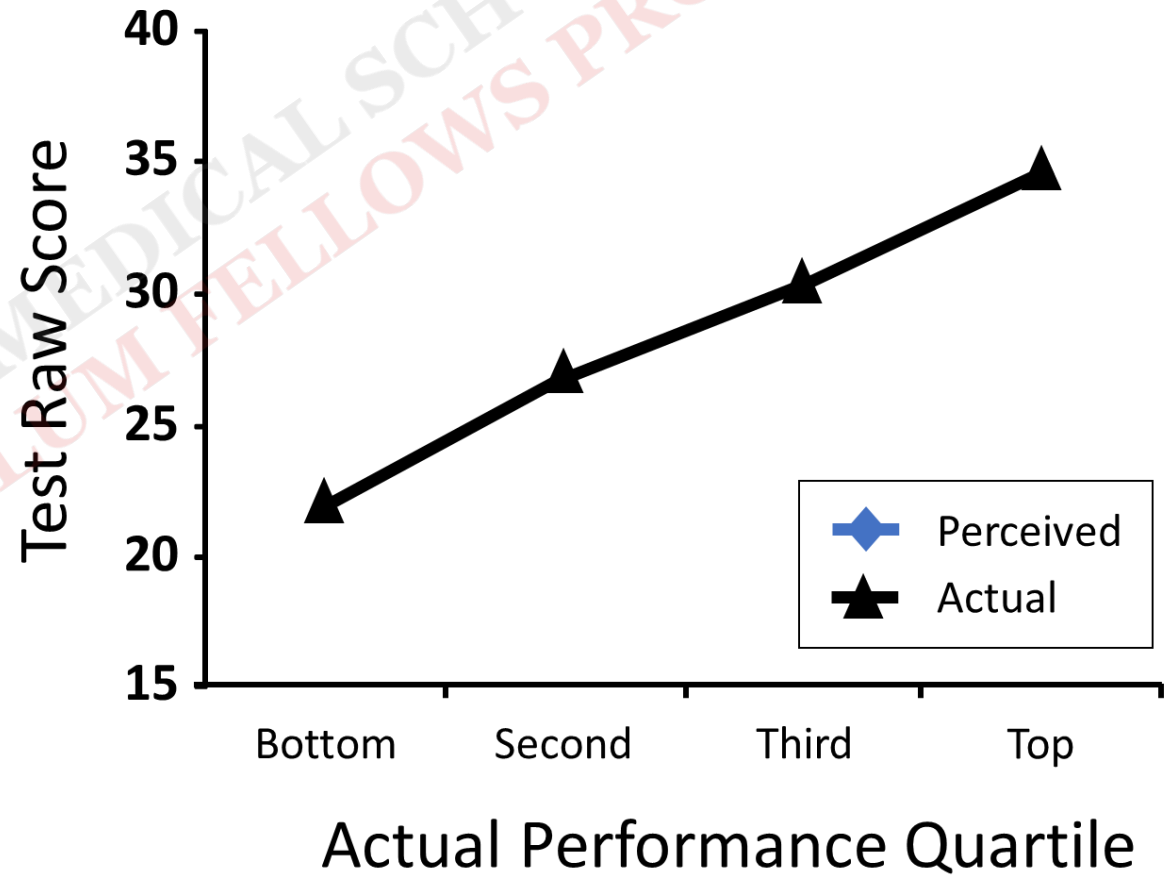

Reading Comprehension

Andrew C. Butler and Henry L. Roediger III
Washington University in St. Louis, MO, USA

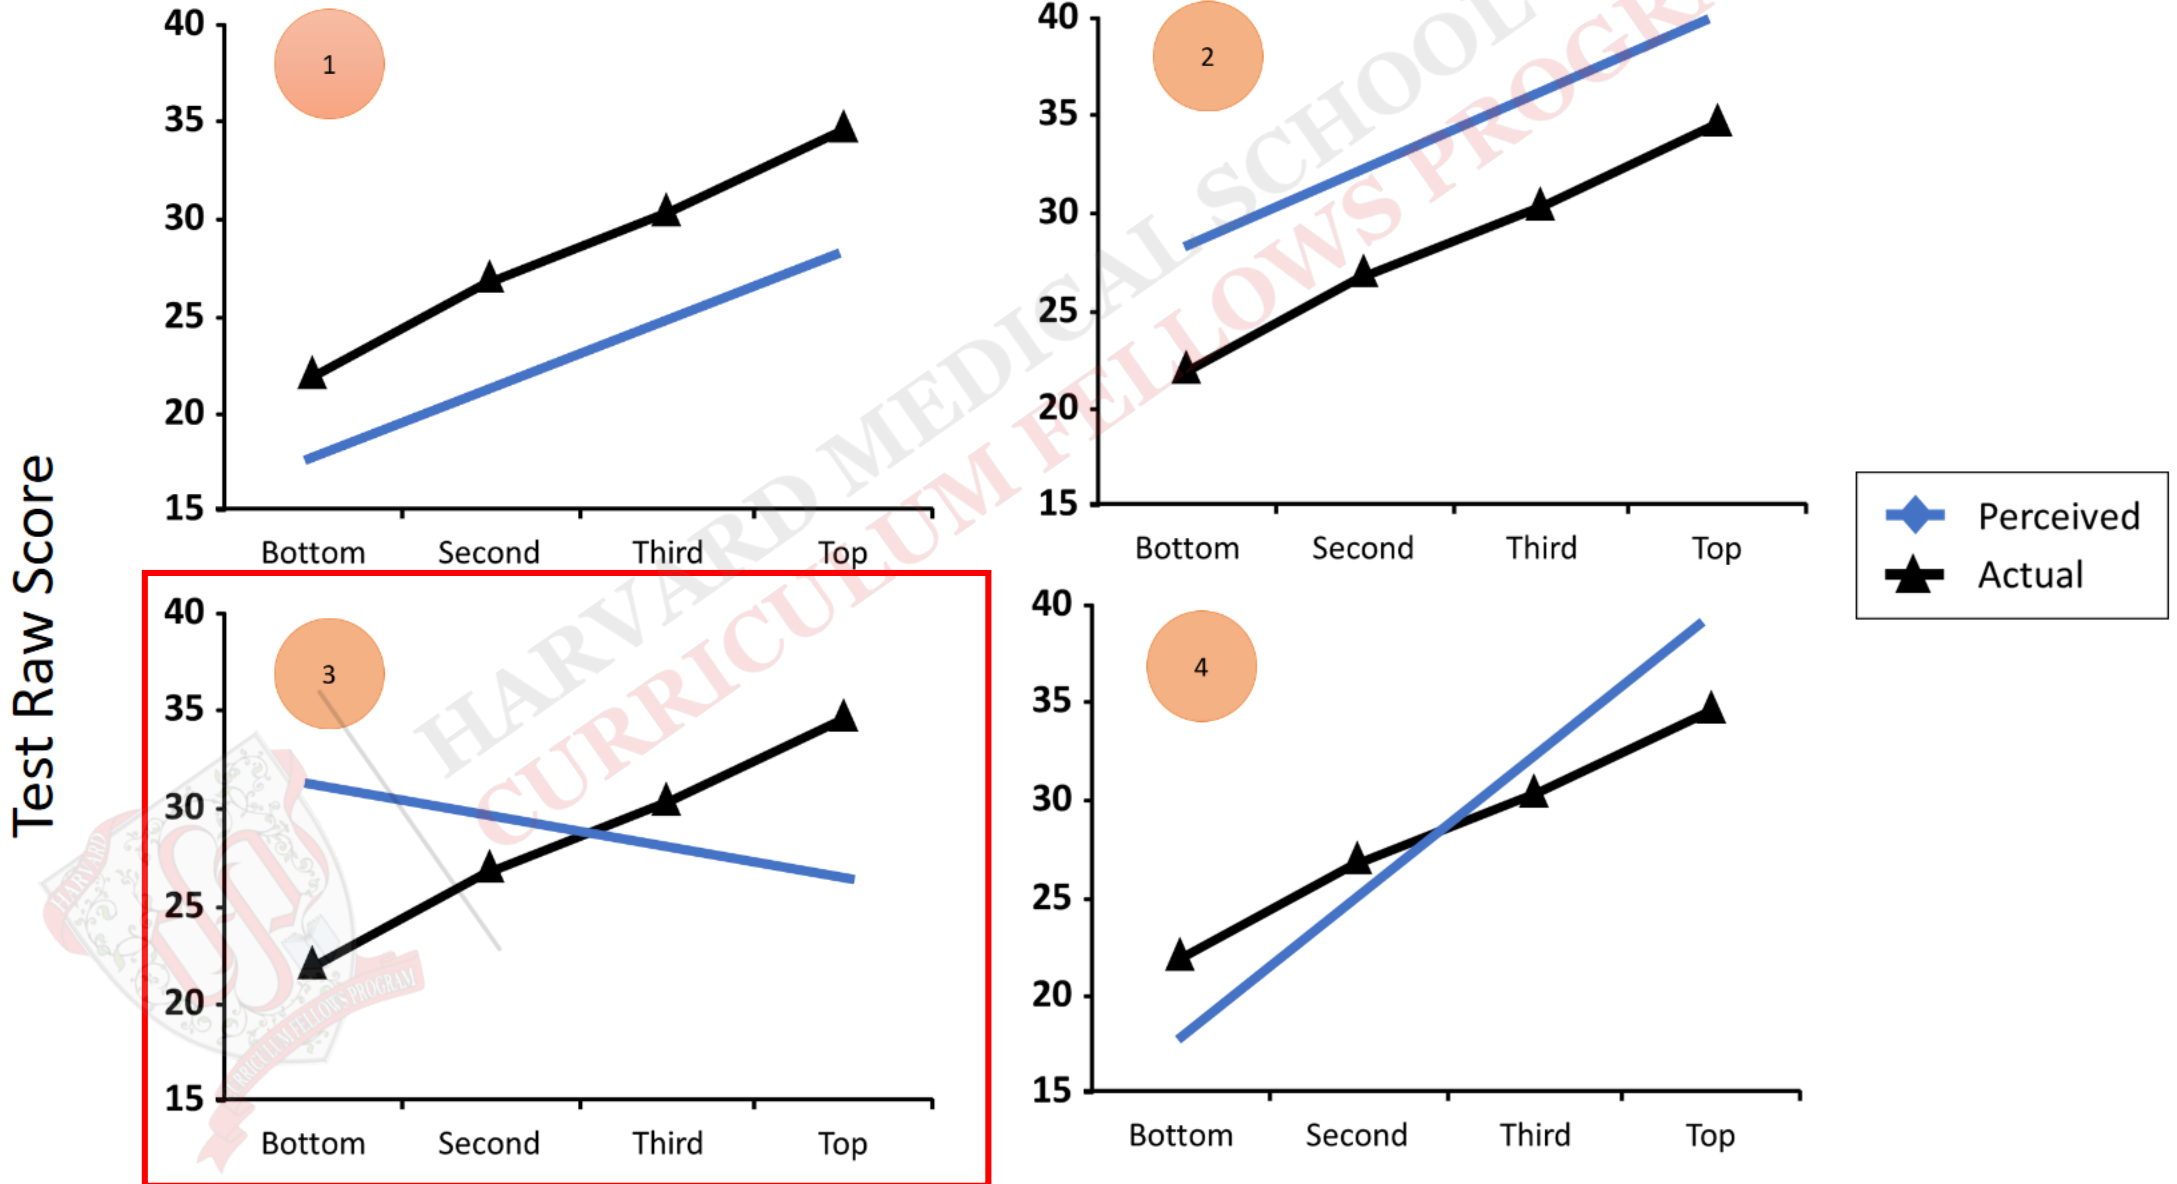

JEMO 2009, 17 (4), 471-479

Psychology Press
Taylor & Francis Group

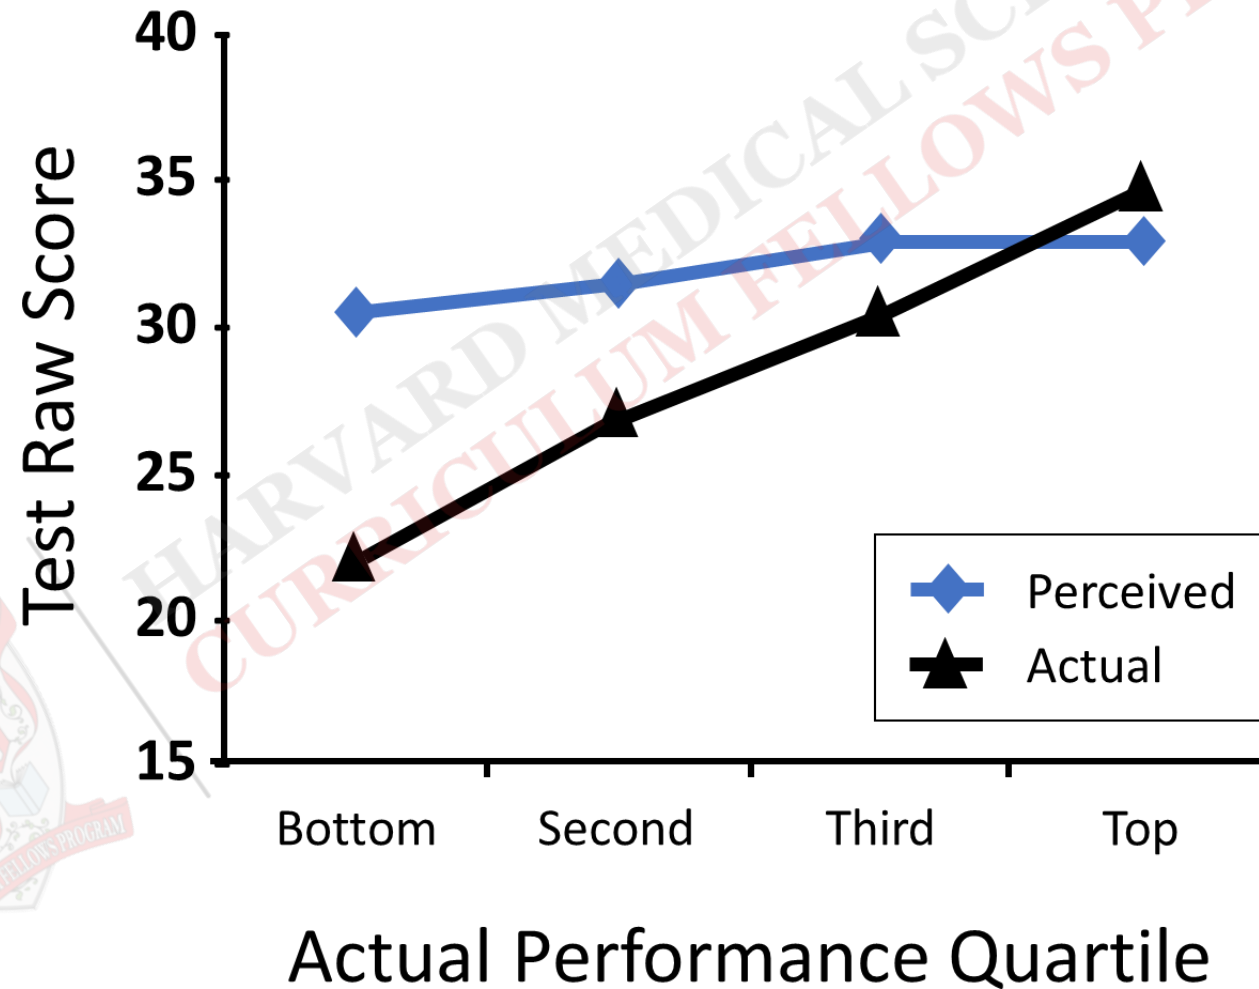

How well do students predict their own scores?

Predictions?

How well do students predict their own scores?

What is metacognition?

Why People Fail to Recognize Their Own Incompetence

David Dunning,¹ Kerri Johnson, Joyce Ehrlinger, and Justin Kruger

Department of Psychology, Cornell University, Ithaca, New York (D.D., K.J., and J.E.), and Department of Psychology, University of Illinois, Champaign-Urbana, Illinois (J.K.)

The Dunning-Kruger Effect

The Double Curse

People lack the skill to...

1. produce correct answers
2. know when their answers are right or wrong

The Undue Modesty of Top Performers

1. Good gauge of self-performance
2. Overestimates others

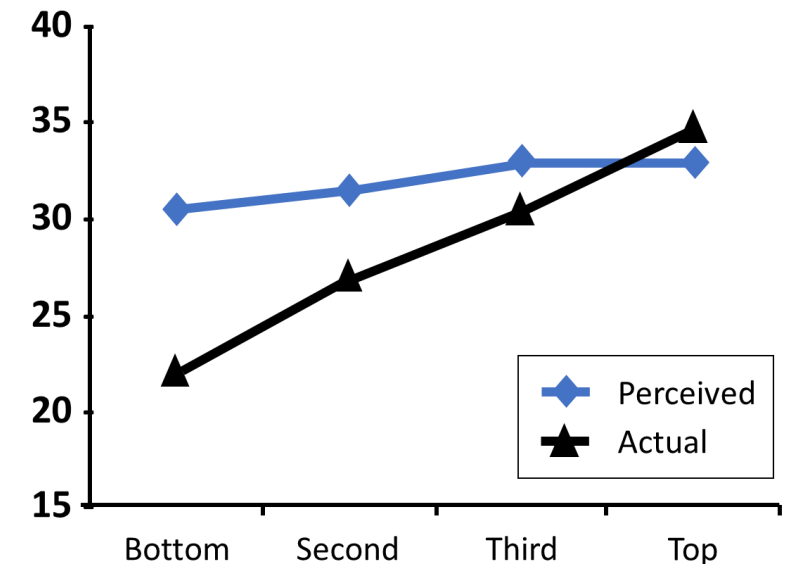

Why care about metacognition?

The Dunning-Kruger Effect:

- ✓ **Debate teams'** performance in a college tournament
- ✓ **Medical lab technicians'** knowledge of medical terminology
- ✓ **Medical residents'** patient interviewing skills
- ✓ **Hunters'** knowledge of firearms

*Even if promised up to \$100 for accuracy

Ehrlinger, Johnson, Banner, Dunning, & Kruger (2003)

Hodges, Regehr, & Martin (2001)

Haun, Zeringue, Leach, & Foley (2000)

Ehrlinger, J., & Dunning, D. (2003).

A Tale of Two Papers

01

Why People Fail to Recognize Their Own Incompetence

David Dunning, Kerri Johnson, Joyce Ehrlinger, and Justin Kruger

Predicting performance

Department of Psychology, Cornell University, Ithaca, New York (D.D., K.J., and J.E.), and Department of Psychology, University of Illinois, Champaign-Urbana, Illinois (J.K.)

02

What cognitive strategies in student learning: Do students practise retrieval when they study on their own?

Reading Comprehension

Andrew C. Butler and Henry L. Roediger III
Washington University in St. Louis, MO, USA

JEMO 2009, 17 (4), 471-479

Psychology Press
Taylor & Francis Group

Reading Comprehension

MEMORY, 2009, 17 (4), 471–479

 Psychology Press
Taylor & Francis Group

Metacognitive strategies in student learning: Do students practise retrieval when they study on their own?

Jeffrey D. Karpicke

Purdue University, West Lafayette, IN, USA

Andrew C. Butler and Henry L. Roediger III

Washington University in St. Louis, MO, USA

Study Strategies

Strategy	List strategy	Rank as #1 strategy
“Memorize”	19%	6%
Self-test	11%	1%
Rewrite notes	30%	12%
Reread notes or textbook	84%	55%
Do practice problems	43%	12%

N = 177

Study Strategies

Imagine you are reading a textbook chapter for an upcoming exam. After you have read the chapter one time, would you rather:

N=76

a. Go back and restudy either the entire chapter or certain parts of the chapter

41%

b. Try to recall material from the chapter (with the possibility of restudying afterward)

42%

c. Use some other study technique

17%

Why care about metacognition?

1

Rereading is not an effective strategy for promoting learning and long-term retention.

(McDaniel & Callender, 2008)

2

Retrieval testing is.

“The testing effect”
Gates (1917)

3

A high proportion of students are rereading and think that it is the best strategy.

Karpicke, Butler & Roediger
(2009)

The Plan

- Metacognition primer activity
- Metacognition:
 - What it is
 - Why it matters

Strategies for *instructors*

- Strategies for *students*
- Activity revisited

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

Strategies for instructors

Effect size ≥ 1.0 : advancing student achievement by approximately a full grade.

Hattie (2003)

Mean ES (S.E.)	All dependent variables*	Academic performance overall*
Metacognitive	.70 (.06)	.69 (.10)
Cognitive	.37 (.08)	.13 (.20)
Metacognitive and cognitive	.78 (.05)	.69 (.11)
Motivational	.94 (.17)	1.36 (.31)
Metacognitive and motivational	1.13 (.18)	1.23 (.31)
Cognitive and motivational	.69 (.06)	.55 (.08)
Random effects variance component, v	.20	.23

Dignath et al. (2008)

Strategies for instructors

Cognitive knowledge

&

Cognitive regulation

1) Content Knowledge

How well do I know the content?

2) Task Knowledge

What makes this task challenging?

3) Strategy Knowledge

What's my plan of attack?

Strategies for instructors

Cognitive knowledge

&

Cognitive regulation

Am I using the strategy I picked?

1) Monitoring

Is it working?

2) Evaluating

Am I confident?

3) Motivating

Strategies for instructors

Curriculum and expectations:

- State objectives or learning outcomes.
- Tell students they are responsible for their own learning
- Provide timely feedback
- Provide practice tests

Strategies for instructors

In the classroom:

- Active learning
 - Think-pair-share
 - Clicker questions
 - Reciprocal teaching
 - Concept maps
 - Problem solving
- Have students share their study strategies

The Plan

- Metacognition primer activity
- Metacognition:
 - What it is
 - Why it matters
- Strategies for *instructors*
- ➔ Strategies for *students*
- Activity revisited

Strategies for students

- Self-regulate your learning
 - Plan – “What strategy should I use?”
 - Monitor – “Am I using this strategy correctly? Do I understand?”
 - Reflect – “Is this strategy helping me learn?”
- Self-test
- Figure out what works best for you (Visual-Auditory-Read/write-Kinesthetic learner)*
- Study with others

Strategies for students: Reading comprehension

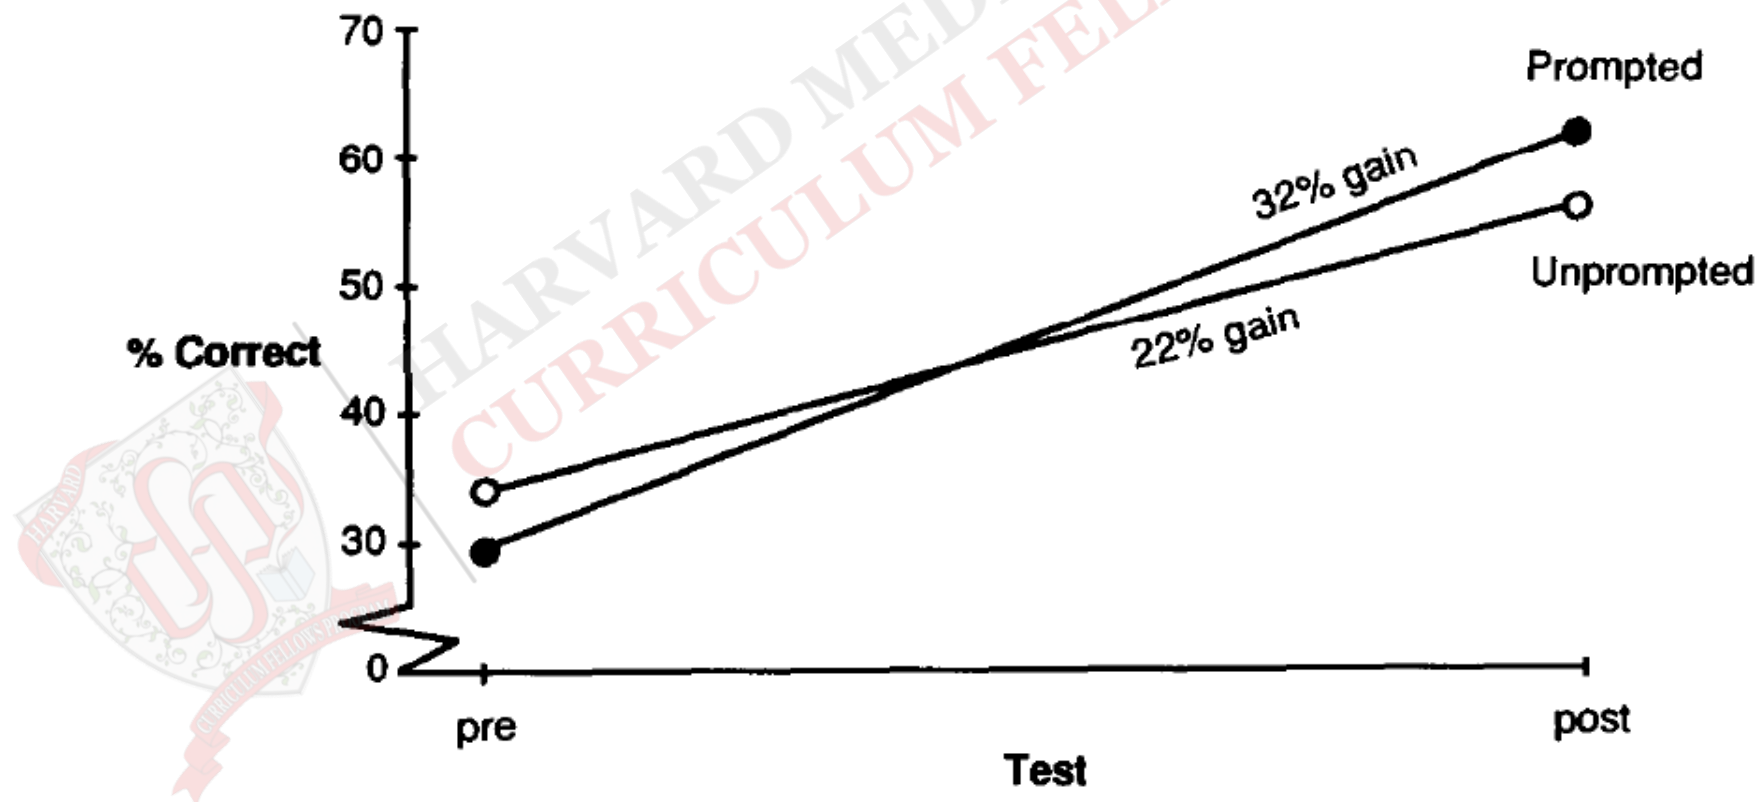

Self-explanation: “Any utterance...beyond the information given, namely, an inference of new knowledge.”

Types of Idea Statements				
	GOOD		POOR	
	Proportion (%)	Frequency*	Proportion (%)	Frequency*
Physics Explanations	29	15.3	16	2.8
Monitoring Statements	39	20.1	42	7.3
Others (Include Paraphrase)	32	16.5	42	7.4
Total	100	51.9	100	17.5

* An average number of statements per student per example.

Strategies for students: Reading comprehension

Self-explanation can be taught.

Types of self-explanation

Comprehension Monitoring	Being aware of understanding
Elaboration	using prior knowledge or experiences to understand the sentence; adds details to expand on an idea, includes use of metaphors and analogies
Goal-driven Predictions	A goal is inferred of a particular structure or action Predicting what the text will say next
Bridging	Making reference to an idea presented in a previous sentence in the text to better understand relations between sentences
Summarizing	Identifying main points across multiple sentences
Paraphrasing	Restating the text in different words

Strategies for students: Reading comprehension

General Structure of the Heart: The septum divides the heart lengthwise into two sides. The right side pumps blood to the lungs, and the left side pumps blood to other part of the body. Each side of the heart is divided into an upper and a lower chamber. Each lower chamber is called a ventricle. Each upper chamber is called an atrium. In each side of the heart blood flows from the atrium to the ventricle.

Student A

Student B

Use of Self-Explanation Strategy

	Gains by Question Type		
	<u>Structure</u>	<u>Pathway</u>	<u>Function</u>
<i>Self-explanations</i>	0.83	0.23	0.46**
Goal-driven	0.21	0.01	0.44**
Elaborative	0.12	0.24	0.37*
Noticing coherence	-0.21	-0.12	0.13
Positive monitoring	0.02	0.09	0.14
Negative monitoring	0.04	0.07	-0.18
Paraphrase	0.19	0.14	0.22
False	0.01	0.10	-0.01

* $p < 0.05$
** $p < 0.01$

Strategies for students: Reading comprehension

- Self-explanation works for reading text of various content.
- Theory:
 - Active
 - Constructive
 - Piecemeal

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

The Plan

- Metacognition primer activity
- Metacognition:
 - What it is
 - Why it matters
- Strategies for *instructors*
- Strategies for *students*

Activity revisited

HARVARD MEDICAL SCHOOL
CURRICULUM FELLOWS PROGRAM

Meta- cognition Primer Revisited

- 1) Have paper and pen ready
- 2) *Without naming them*, predict how many animals you think you can write down in 60 seconds?
(full names, not abbreviations)

3)

*Real knowledge is to know the
extent of one's ignorance.*

—Confucius
